TRAN QUANG TIN

LLM | RAG | Agents

Phone: 082 555 7001 | Email: tranquangtin337@gmail.com | GitHub: github.com/Tinnnn-vn

I did not start out as a professional programmer or AI expert. My journey began simply with curiosity about Machine Learning algorithms. From there, I engaged in self-study, research, and hands-on problem-solving through coding to build complete systems from scratch. I transitioned from product and graphic design to applied AI engineering, focusing on LLMs, RAG, Agents, and Generative AI. I place a premium on meticulousness, pipeline optimization, and data quality, prioritizing these above all else, as I believe they are the core factors determining a product's effectiveness.

Core Skills

Languages	Python, SQL, HTML, CSS
Backend	FastAPI, REST APIs, Git/GitHub, uv (package manager)
LLM / RAG	LangChain, LangGraph, LlamaIndex, RAG pipelines, Vector search, Hybrid Retrieval, Reranking, Contextual compression, Prompt engineer
AI / ML	PyTorch, Machine Learning, Deep Learning, Transformers, Diffusion, LLM fine-tuning experiments, Ollama (Local LLM Execution)
Generative AI	TTS, voice cloning experiments, tool use, LLM applications, AI Agents, Evaluation (RAGAS)
Data / Ingestion	SQL, ChromaDB, Qdrant, Docling, LlamaParse, Embeddings, Document ingestion and Processing
Cloud / Infrastructure	Basic AWS/GCP deployment, Firebase, Vast.ai (GPU Cloud Instance Management)
Design	Product Design, Web Design, Marketing Design

Professional Experience

Design Team Lead / Graphic Designer **2023–2025**

Product, Web & Marketing Design

- Led product, web, and marketing design initiatives while maintaining visual consistency and delivery quality.
- Coordinated design direction, task allocation, reviews, and cross-functional delivery with stakeholders.
- Built strong foundations in product thinking, communication, prioritization, and iterative problem solving.

Selected AI Projects

TTS Fine-tuning & Voice AI Experiments 2025

- Built experimental TTS pipelines for voice cloning and speech synthesis.
- Investigated models such as F5-TTS, Fish-Speech and FastSpeech.
- Studied dataset preparation, inference optimization and evaluation methods.

LangGraph ReAct Agent Starter GitHub

- Implemented agent workflow with state management and tool calling.
- Integrated custom Python tools and LLM reasoning loops.
- Designed modular architecture for extensible agent behaviors.

RAG / LLM Knowledge System GitHub

- Processed complex PDF/documents using Docling for structured parsing (LaTeX formulas, tables, layout analysis).
- Built a modular RAG pipeline featuring hybrid retrieval (BM25 + ChromaDB), reranking, and contextual compression, improving document retrieval relevance and reducing latency.
- Deployed local inference environments using Ollama for lightweight models to optimize response latency and resource efficiency.

Education & Independent Study

FPT Polytechnic – Graphic Design **2019–2022**

Independent Study – Computer Science **2022–2023**

Programming Basic

Independent Study – Mathematics, ML & DL **2025–2026**

Mathematics, Machine Learning, Deep Learning, PyTorch

Additional

Career Direction	LLM applications, RAG systems, and AI Agents
Portfolio	github.com/Tinnnn-vn
Languages	Vietnamese (Native), English (Technical Reading / Learning)
